

STRYKER F1

ABOUT

The **Stryker F1** surgical power tool is a versatile and cordless system designed specifically for small bone procedures. It features the innovative SmartGRIP technology, combining handpiece, cord, and console electronics into one device, providing unmatched maneuverability and control. The F1 System offers five interchangeable motors, including options for sagittal, oscillating, and reciprocating saws, along with a micro drill and universal motor. With its lightweight design, high-capacity battery cells, and resistance to thermal damage during sterilization, the F1 ensures consistent power and reliability during demanding procedures. This customizable system supports an array of attachments, enabling precise performance across a variety of surgical applications.

FEATURES

SmartGRIP: Combines multiple components into one for better control and minimal sterility risks.

Interchangeable Motors: Includes sagittal, oscillating, and reciprocating saws, plus a micro drill and universal motor for diverse applications.

Battery Performance: High-capacity cells allow multiple procedures without recharging and remain operational for 30 days on the shelf.

Comprehensive Sterilization Options: SmartGRIP modules and components are compatible with approved autoclave cycles.

Customizable System: A wide range of cutting accessories, including exclusive micro dual-cut blades and resurfacing tool burs.

CUSTOMIZABLE PACKAGE
