

The future of Point Of Care ultrasound is here. Sonosite iViz is a highly portable ultrasound augmented with mobile computing and advanced connectivity, empowering providers to practice visual medicine when and where needed. iViz is designed from the ground up by a medical device company to provide the ultrasound penetration and image clarity that compares with larger and heavier systems.

**Mobility** -iViz easily goes between wards, ICUs, and clinics. Light weight portable design with one-handed fit and control allows for easy maneuvering on the ground at the patient side, in transport with the patient, or for home visits.

**Clarity** - Make confident decisions with the 7" high-resolution touch screen and innovative thumb operated user interface. iViz supports a range of clinical applications, interchangeable transducers, and optimization controls (image and exam), allowing for a more accurate assessments.

**Connectivity** - Integrated Wi-Fi and Bluetooth allows advanced connectivity to Hospital Medical IT Systems, Cloud Solutions, and Patient Vital Sensors. iViz empowers providers to remotely diagnose via secure cloud-based telemedicine solutions, seamlessly access patient information from and send reports to the EMR, and easily email anonymized study images. Micro USB, HDMI ports, and audio ports allow iViz to be the ultimate clinical and education platform.
